- **Individual protection measures, such as personal protective equipment**
- **Respiratory protection:** Not required.
- **Hand protection**
 Due to missing tests, it is not possible to give exact information about the glove material for the product.
 Recommended is therefore:
 Only use chemical-protective gloves with CE-labelling of category III.
- **Material of gloves**
 Recommended for contact with the product are protective gloves of chemical protection category III made of special nitrile (material thickness > 0.1 mm). Protective gloves should be tested for workplace specific suitability (e.g. mechanical and thermal resistance, antistatic, etc.). For first signs of wear, the protective gloves must be replaced immediately.
 The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- **Penetration time of glove material**
 The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
 Penetration time > 480 minutes recommended. Named penetration times can be significantly shorter in practice.
- **Eye/face protection** Goggles recommended during refilling
- **General protective and hygienic measures:**
 The usual precautionary measures are to be adhered to when handling chemicals.
- **Environmental exposure controls**
 Do not allow product to reach ground water, water course or sewage system.
